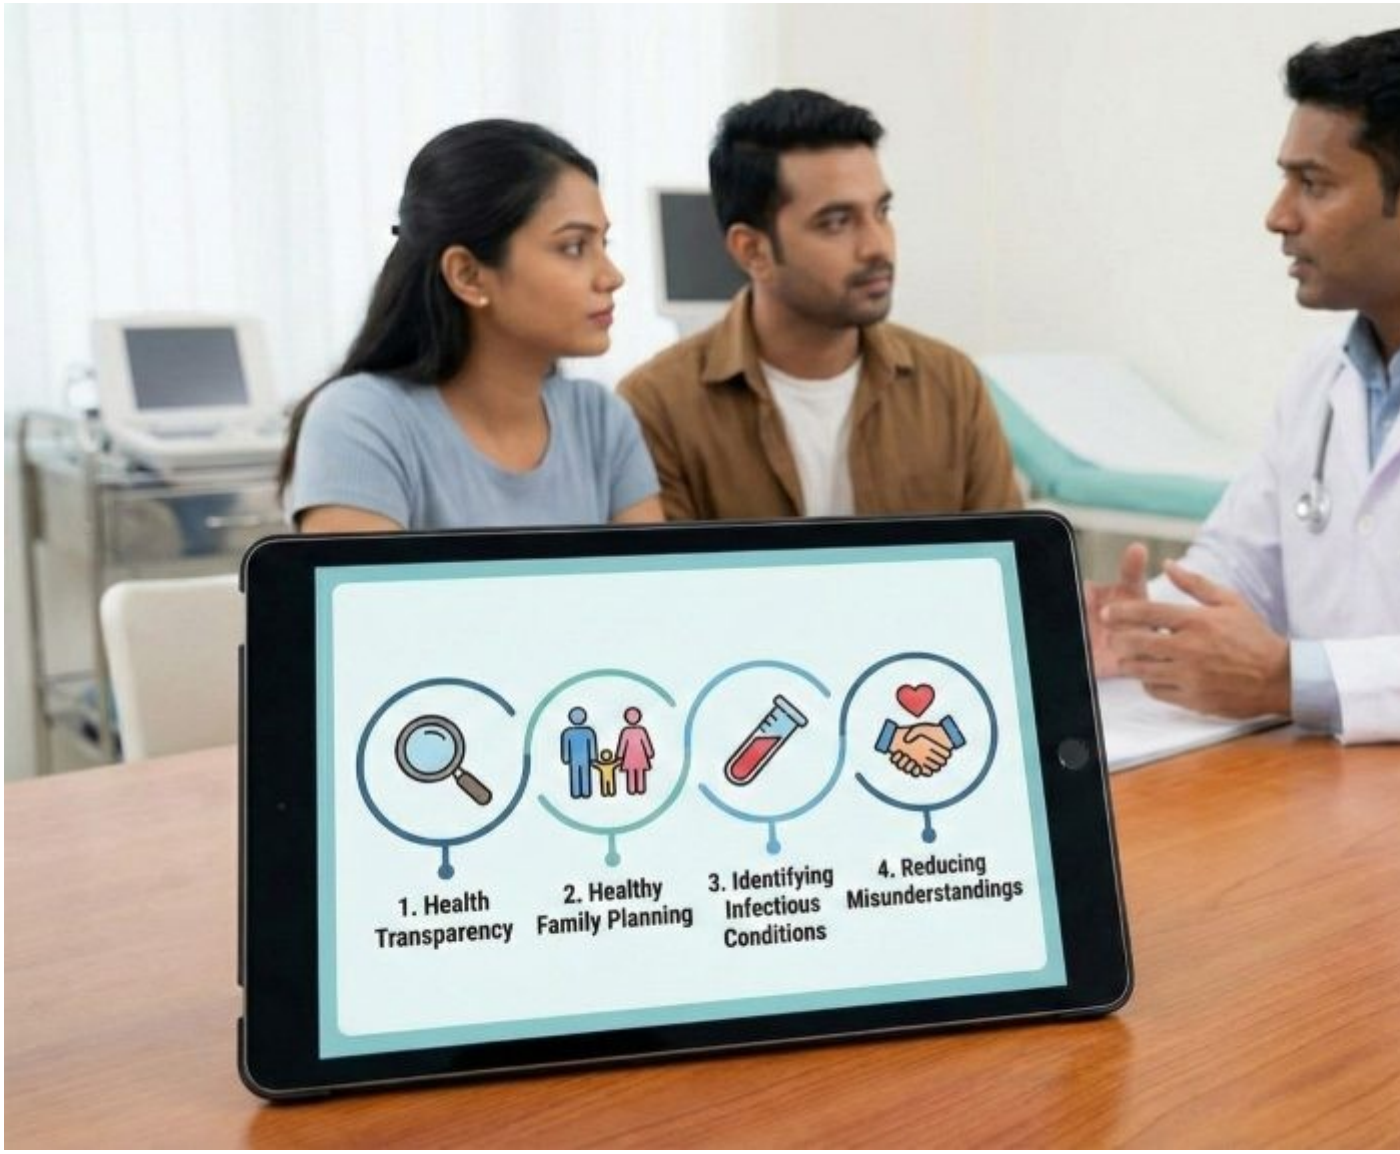
Today, in this article we will look at the **Pre Marital Health Compatibility Test In India** on **Medical Kundali**.

What Is A Pre Marital Health Compatibility Test In India?

A premarital health compatibility test is a complete medical check done for couples before marriage. It helps to find the hereditary conditions, infectious diseases, fertility issues or lifestyle problems that may affect the couple's future health or the family planning.

The aim is to support the trust & awareness between partners so they feel safe & informed.

Why Is Pre Marital Health Compatibility Important?



1. Health Transparency:

The Pre marriage medical tests list helps both partners know each other’s health conditions early so they can make informed decisions with confidence.

2.Healthy Family Planning:

The test alerts couples about diseases that may pass to the children so preventive steps can be taken early as it’s been said prevention is better than cure and cost effective.

3.Identifying Infectious Conditions:

The tests cover the common infections seen in India so early care becomes simple.

4.Reducing Misunderstandings:

The clear health awareness removes doubts so confidence increases between partners.

What are the Primary Benefits Of Pre Wedding Health Screening in India?

1.Early Detection Of Health Issues:

The Pre wedding health screening India helps find diabetes thyroid problems, hormonal imbalance & the fertility challenges at the right time.

2. Awareness Of Genetic Risks:

The genetic screening alerts couples about the hereditary issues so the pregnancy planning becomes safe.

3.Protection From Future Health:

A simple test today prevents emotional stress, financial load or the sudden problems later.

What are the Mandatory Medical Tests Before Marriage?

1. Physical Examination:

The basic check helps find blood pressure issues, vitamin deficiency anemia or the hidden illnesses.

2.Blood Tests:

The tests check blood sugar, thyroid levels, infection markers & the overall health.

3.Genetic Screening:

The tests help to find the conditions that may pass to future children.

4.Fertility Assessment:

The test is optional but many couples take it to understand hormone levels & reproductive health.

5.Immunity Testing

The tests show protection levels against common illnesses that may affect pregnancy.
